### 1. Introduction

The purpose of this technical document is to provide an overview of the "Top Restaurants and Halal Restaurants" application. This application aims to help users find and explore top restaurants and halal restaurants in their area. Users can view restaurant menus, make reservations, and get information about different cuisines. The target audience for this application includes food enthusiasts, tourists, and individuals looking for halal dining options.

### 2. Project Objective

The objective of the "Top Restaurants and Halal Restaurants" application is to provide a convenient platform for users to discover and access information about various restaurants. The application allows users to explore different cuisines, view restaurant menus, and make reservations. The goal is to assist users in finding their preferred dining options and enhance their overall dining experience.

### 3. Project Background

The idea for the "Top Restaurants and Halal Restaurants" application originated from the need to provide a comprehensive resource for individuals seeking information about restaurants. The application utilizes HTML, CSS, and JavaScript to create a user-friendly interface and interactive features. The decision to create a web-based application was made to ensure accessibility across multiple devices and platforms.

The interface of the application is designed to be visually appealing and intuitive for users. The use of images, headings, and descriptive text allows users to quickly navigate through the application and find the desired information. The application cannot accommodate multiple users simultaneously.

## 4. Tools and Technologies Used

The development of the "Top Restaurants and Halal Restaurants" application involved the following tools and technologies:

- HTML: Used to structure the web pages and define the content.
- CSS: Used to style the web pages and enhance the visual presentation.
- JavaScript: Used to add interactivity and dynamic functionality to the application.
- Visual Studio Code: A source code editor used for coding and debugging.
- Pexels: An online platform used to source high-quality images for the application.
- Microsoft Paint: Used to edit pictures, insert shapes, and add text in different color and form.

## 5. Timeline and Deliverables

The development of the "Top Restaurants and Halal Restaurants" application followed a timeline of three days. The deliverables for the project included:

- Completion of HTML, CSS, and JavaScript coding for the application.
- Integration of restaurant links and external resources for menu access.
- Testing and debugging of the application to ensure functionality and usability.
- Creation of a contact form for users to provide feedback and inquiries.
